Catalogue screen Showing a route and the AVCS catalogue.

Planning Station

The back-of-bridge PC application that brings together a set of powerful voyage-planning tools to support safe and compliant navigation.

These include an integrated ADMIRALTY digital catalogue, a chart and publication holdings management and updating service, and an enhanced viewer for digital ADMIRALTY Maritime Products & Services.

Planning Station supports the voyage-planning process and frees up bridge crews to spend more time on other important duties.

Quicker, more informed voyage-planning decisions

Bridge crews can view relevant navigational information in one place, making it easier to plan voyages and view intended routes in detail.

ADMIRALTY products that can be overlaid on AVCS and ARCS include:

- › ADMIRALTY TotalTide (ATT)
- › ADMIRALTY Digital List of Lights (ADLL)
- › ADMIRALTY Digital Radio Signals (ADRS)

In addition, ADMIRALTY Information Overlay (AIO) can be displayed over AVCS.

A comprehensive digital catalogue of ADMIRALTY products

Bridge crews can access a catalogue of the most comprehensive range of SOLAS-compliant charts and publications available. This includes all the official digital and paper charts and reference publications that are available from the ADMIRALTY Maritime Products & Services portfolio.

Easier navigational information management and ordering

An essential part of the passage-planning process is to ensure the navigational information for an intended route is up-to-date and complete.

With Planning Station, bridge officers can keep costs and download sizes under control by ordering only those charts and publications required for a specific voyage. With digital ADMIRALTY Maritime Products & Services, permits can be ordered and received immediately.

Supporting inspections

Planning Station lets bridge crews view when the digital ADMIRALTY portfolio on board were last updated (their status), and lets them print or export a range of reports to support inspections.

Update screen Pre-selects all updates that you have permits for that are available for download.

View Screens AVCS chart shown with all ADP products overlaid.

Fast and efficient updates

You can receive electronic updates for ADMIRALTY Vector Chart Service (AVCS) by internet download, email or disc, and they can be applied quickly and accurately, with minimal human effort. In addition, it is easy to export information to the ECDIS.

Planning Station also makes it easier to hand over incomplete passage-planning tasks between crew rotations. This digital updating service, available at no extra charge from the UKHO, reduces time and effort compared to paper-based products.

ADMIRALTY Information Overlay (AIO), unique extra navigational information

AIO aids navigators at the crucial passage planning stage. It contains all ADMIRALTY Temporary and Preliminary Notices to Mariners (T&P NMs) and ENC Preliminary Notices to Mariners (EP NMs), which highlight navigationally significant differences between ENCs and ADMIRALTY paper charts.

AIO can be displayed as a single layer on top of ENCs in Planning Station, which is particularly valuable if the ECDIS on board does not currently display AIO, and all AVCS customers receive the unique AIO at no extra cost.

e-Navigator Planning Station frees up valuable time for bridge crews to focus on other critical tasks

e-Navigator Planning Station brings world-leading ADMIRALTY Maritime Products & Services together in a single integrated system, making them easier and quicker to use and manage than ever before.

Why e-Navigator Planning Station

Around 90% of ships trading internationally already carry ADMIRALTY Maritime Products & Services. So it makes sense to have a system specifically designed to maximise the benefits of these trusted products and services.

Making life on board easier – this powerful tool helps bridge officers plan safe routes, simplify essential tasks and inspections, and frees them up to spend more time on other important duties.

Managing paper charts

Bridge crews can record the paper charts they have on board. These are included in the Charts and Publication report, including their update status.
